Our Team

The Natural Power Construction Team help clients to administer contracts and act as their project interface, supervising construction and managing specifications. We provide specific grid and electrical services as well as offering support in the form of civil and structural services, monitoring, witness testing and snagging inspections.

Safety is always our priority, and we are proud to include specialist safety consultants in our team. By providing a range of CDM and project safety services we can instil best practice to all our construction sites. Our engineering team comprises experts in civil, mechanical, electrical, environmental and geotechnical engineering, they are able to make a project run more effectively and act as on-site representatives if required.

Main Tasks and Responsibilities

- Working with our team, you will be versatile and motivated with a wide experience in plant /
- equipment maintenance, fabrication, bespoke projects.
- Perform routine maintenance & repairs on equipment and machinery.
- Conduct inspections.
- Troubleshoot & diagnose.
- Maintain accurate records of maintenance and equipment performance.
- Develop preventative maintenance schedules.
- Comply with safety regulations and maintain a safe working environment.
- You will be based in a modern workshop where planned works take place however sometimes it will
- be necessary to attend our sites to make repairs. Site environments are often remote utilising
- specialist equipment such as Hagglunds and other low ground pressure plant to get access.

General Responsibilities

Adhere to all company policies and procedures
